

Amendments to the Claims

Please cancel Claims 1-48. Please add new Claims 49-59. The Claim Listing below will replace all prior versions of the claims in the application:

Claim Listing

1.-48. (Cancelled).

49. (New) A method for creating an attribute bounded network of computers comprising the steps of:

creating and maintaining a list of attribute bounded electronic addresses representing a plurality of indexable electronic documents, on a computer network, that are associated with a geographically bounded region;

identifying a plurality of computers associated with the geographically bounded region;

in response to receiving a geographically bounded request from one of the computers, assigning one or more geographically bounded electronic addresses from the geographically bounded list;

sending the assigned geographically bounded electronic address to the requesting computer, where the requesting computer processes the assigned geographically bounded electronic address to index one or more electronic documents that are obtained through the assigned geographically bounded electronic address;

creating a geographically bounded searchable index of the electronic documents that are obtained through the assigned geographically bounded electronic address;

storing the geographically bounded searchable index on a tablet device, where the geographically bounded searchable index is accessible offline without accessing the computer network.

50. (New) A method as in Claim 49 further comprising receiving the processed result from the requesting computer.

51. (New) A method as in Claim 49 wherein the geographically bounded region is automatically generated based upon a physical address selected from at least one of a group consisting of: a city, a zip code, a longitude, a latitude, an altitude, a telephone area code, an informal designation and an area relative to a location.
52. (New) A method as in Claim 49 wherein the geographically bounded region based upon a computer address.
53. (New) A method as in Claim 49 wherein the geographically bounded region is a topical boundary.
54. (New) A method as in Claim 49 wherein the network is the Internet and the electronic addresses are represented as Uniform Resource Locators.
55. (New) A method as in Claim 1 wherein the step of assigning further includes overlapping the assignment of attribute bounded electronic addresses to multiple computers.
56. (New) A method as in Claim 49 wherein assigning one or more geographically bounded electronic addresses from the geographically bounded list further includes:
 - matching at least one of the electronic addresses in the geographically bounded list to at least one attribute from the attribute bounded request; and
 - in response to determining that no electronic addresses in the geographically bounded list matches any attribute from the attribute bounded request, assigning an electronic address from the geographically bounded list that does not match the attribute bounded request from the requesting computer.
57. (New) A method as in Claim 49 wherein processing step further comprises

spidering, on the requesting computer, the assigned geographically bounded electronic address.

58. (New) A method as in Claim 1 wherein the plurality of computers uses peer-to-peer technology to form a virtual community associated with the geographically bounded region.
59. (New) A method for creating an attribute bounded network of computers comprising:
- identifying a plurality of computers associated with a geographically bounded attribute to create a geographically bounded network of computers;
 - maintaining a list of geographically bounded electronic addresses representing a plurality of indexable electronic documents that are associated with the geographically bounded attribute;
 - assigning electronic addresses from the geographically bounded list to computers in the geographically bounded network of computers;
 - in response to receiving the assigned electronic addresses from the geographically bounded list, indexing by computers in the geographically bounded network of computers, one or more electronic documents having geographically bounded electronic addresses;
 - creating a geographically bounded searchable index of the electronic documents;
 - and
 - storing the geographically bounded searchable index on a tablet device, where the geographically bounded searchable index is accessible offline without accessing the computers in the geographically bounded network of computers.
